Market Leader in Gold Production

Business Analysis

Newmont Corporation is the world's largest gold producer, with a market cap of \$83,388.7mm. It is the only S&P-listed gold producer and operates in 13 different countries internationally.

Industry Analysis

The metals and mining industry is fragmented, with many major and mid-sized players globally and no single dominant leader. Valuations are driven by geographical risks, mine quality, and market share. The industry is expected to grow at a CAGR of 3.5% until 2032.

Key Investment Theses

1

Portfolio restructuring and divestitures in low-quality assets will increase Newmont's operational efficiency, improve its margins, and allow it to allocate its income back to company development through investments.

2

Newmont is a large, established player with strategic alliances and a strong moat; rivals must consolidate or merge horizontally to gain market share in a competitive industry with extremely high costs of entry.

3

As the market leader in gold production, Newmont is uniquely positioned to benefit the most from a bullish cycle in the price of gold, catalyzed by potential impending FED rate cuts.

Based on our Target price of **\$91.85**, we recommend a **BUY** rating for **Newmont Corporation** from **\$79.25**, implying a **15.9% upside**.

Largest Upstream Gold Producer Globally

Business Overview

- Newmont is the world's largest gold producer (~34%), extracting ~7 million ounces of gold in 2024, with a NAV of ~\$27B.
- In addition to gold, Newmont produces copper, silver, lead, and zinc.
- The company sells to a range of customers, including bullion banks/refiners, jewelry manufacturers, and commodity investors.
- Newmont differentiates itself with the scale of its operations and the quality of its mines (high concentration of Tier 1 mines).
- Newmont is well-integrated into the supply chain process, delegating regional issues to suppliers and partnering with KPMG to implement the SAP Ariba platform to manage its global outreach.

Key Metrics

Market Cap	\$86,760.6 MM	Net Debt	\$954 MM

Share Price Performance

Leadership & Strategic Objectives

Corporate Re-structuring

In late 2024, Newmont undertook a major restructuring that involved the dismissal of several senior managers. As part of this process, the company streamlined its organizational structure by consolidating five business units into three, resulting in the elimination or merger of certain leadership roles. These changes, implemented following the Newcrest acquisition, were designed to optimize costs, enhance operational efficiency, and strengthen long-term competitiveness.

Newmont's Three Strategic Objectives

1. Deliver superior operational execution through safe operations, reliability, and strong leadership
2. Build and sustain a global portfolio with high margin, long-life mines using profitable expansions, exploration, and value investments
3. Generate industry-leading returns while maintaining high ESG standards

Francois Hardy
 Title: Exec VP & CTO (2024)
 Year of experience: 20+ with Newmont
 Education: Bachelor's in Mine Engineering @ the University of Johannesburg

Key Milestones in Newmont's Success

- 2023 – Newcrest Acquisition- CEO **Tom Palmer** led the \$16B transaction that helped expand Newmont's tier-1 gold & copper assets. This strengthened its position in the market by extending the average reserve life beyond 10 years and cutting production costs. It also significantly increased copper production to 15-20% of Newmont's revenue.
- 2019- Goldcorp Acquisition- CEO **Tom Palmer** orchestrated the \$10B merger, which led Newmont to become the world's largest gold producer. Its portfolio significantly expanded with new mines and reserves, increasing its annual production by approximately 2.3M ounces of gold.
- CTO **François Hardy** has been an integral part of the Newcrest and Goldcorp acquisition, standardizing data systems, fleet management automation, and ore-processing technology across new mines. His contribution is expected to help Newmont achieve a \$500M annual synergy cost savings.
- 2007- American Power Conversion (APC) Sale- CLO **Peter Wexler** guided APC through its \$6B sale to Schneider Electric. His impressive track record with multijurisdictional deals supported Newmont through legal hurdles during its divestitures.

Value Delivered to Stakeholders

Shareholder Value

- In FY 2024, Newmont had 2.9B in FCF, driven by strong operations and divestitures
- The strong cash flow allowed Newmont to fund a consistent dividend program, which has returned \$1.1B through quarterly dividends and \$1.2B through share repurchases

Operational & ESG Impact

- By 2024, Newmont had achieved an approximately **30%** reduction in Scope 1 and Scope 2 absolute GHG emissions, relative to 2020 baseline levels, across its global operations
- Recognized as the **#1** gold miner on the Dow Jones Sustainability Index for ESG leadership and community investment

Net Income over the years

Gold Production Process

Extraction Process

1. Mining

Newmont mines gold through both open-pit and underground operations

2. Crushing & Processing

Once delivered, the ore is crushed into smaller fragments, then ground into fine particles and processed depending on the ore type

3. Gold Recovery

After leach processing, the gold is stripped from carbon using hot caustic solutions

4. Refining & Reclamation

Doré gold bars are sent to 3rd party refiners, where impurities are removed to produce pure gold

Revenue by Product

- GOLD: \$15,746mm
 - COPPER: \$1,327mm
 - SILVER: \$792mm
 - ZINC: \$622mm
 - LEAD: \$195mm
 - Newmont primarily focuses on gold, with secondary production in silver, copper, and zinc*
- *Peñasquito is the only mine with all 4 metals

Revenue Segments

- 48% of the revenue is linked to bullion sales, facilitated through major banks
- The other 52% is diversified through by-product sales and refining operations

Recent acquisition of Newcrest Mining

- In 2023, Newmont completed a \$16.8 billion acquisition of Newcrest Mining
- It absorbed 5 primary operating mines from Newcrest, expanding the company's footprint across Australia, Papua New Guinea, and Canada
- A key driver of this acquisition was copper exposure, doubling their reserves to almost 100 billion pounds and placing the company at the forefront of copper production worldwide

Project Pipeline and Brownfield Expansion

The list below outlines Newmont's major ongoing projects, both on-site and in the surrounding areas of the mine.

- *Ahafo North* → Developing 4 new open pits
- *Tanami* → life extension beyond 2040 & underground expansion
- *Pamour* → life extension beyond 2035 + capacity optimization
- *Cerro Negro* → life extension beyond 2030, new storage facilities
- *Galore Creek* → greenfield development across roads and water
- *Nueva Union* → huge potential upside on underdeveloped deposits
- *Hotham Wind Farm* → development of renewable energy source

Ownership Structure

- Newmont is fully controlled by thousands of individual shareholders, with the largest owners being institutional investors
- Collectively, retail investors own ~20% of the overall business, effectively making it an institutionally run operation
- Due to its diverse ownership, no single entity entering or exiting its position can largely impact Newmont's valuation
- Further, being the only gold mining stock in the S&P 500, any trade will be executed quickly with high liquidity
- Most institutional investors rely on Newmont for dividend returns, and are unlikely to exit their position - barring any major headwinds

Newmont's Competitive Edge

Industry Trends

- It is very time-consuming and costly to open new mines. It can typically take between 10 and 20 years after a deposit is discovered to begin producing gold
- Tariffs and trade pressures, combined with a growing push for sustainable operations, have been driving mining costs higher, increasing costs and barriers to entry
- Gold is currently trading at an all-time high, with analysts generally remaining bullish

Newmont

- Newmont benefits from unparalleled mine diversification across continents - helping stabilize outputs and margins - aided by its 2023 takeover of Newcrest Mining, expanding its reach
- Newmont trades at a TTM EV/FCF ratio of 16.6x, a discount to the industry median of 22.36x. As operational efficiencies are realized and mining costs per ounce decline, the company should see margin expansion, which could drive its valuation closer to industry peers

Competition

- Barrick Gold and Agnico Eagle stand as Newmont's largest competitors, with significant outputs as the world's second and third largest gold producers, making up considerable market share
- As smaller producers struggle to compete with rising costs, larger firms like Newmont are positioning for growth by consolidating assets through M&A
- Due to rising input costs and AISC of gold production, many competitors are also concentrating their portfolio towards owning tier 1 mines

Newmont's scale and global diversification positions it well in the industry.

Key Macroeconomic/Industry Headwinds & Tailwinds

Tailwinds

Financial Strength in a Debt-Heavy Industry

- Newmont is the only gold producer in the S&P 500, highlighting its appeal to investors
- Newmont ended the second quarter of 2025 with \$10.2 billion in total liquidity and a current ratio of 2.2x, a very important aspect in a heavy CAPEX spending industry such as mining
- On August 27th 2025, Moody's upgraded the company's credit rating to A3 from Baa1. This upgrade not only lowers borrowing costs but also broadens the potential investor base and signals strong confidence in the company's long-term stability

Increased Benefit From Tariff Exception

- US President Trump publicly announced a tariff exception on gold on August 11th, which was confirmed via an executive order on September 8th
- Newmont has strong production leadership, and in 2024 the company produced approx. 6.7 million ounces of gold, far ahead of its nearest rival Barrick Gold at 3.9 million ounces, allowing Newmont to benefit most from this move
- This has been solidified by acquisitions such as Goldcorp in 2019 and Newcrest in 2023, which gave the company access to many more high-quality mining sites

Headwinds

Competitors' Concentration on Tier 1 Mines

- Many major gold producers (Newmont, Barrick, Agnico Eagle) are shifting their operations to focus on tier 1 mines
- Tier One mines: operations with 500,000+ ounces annual production, 10+ year mine lives, and bottom-quartile costs
- High inflation, rising input costs, and geopolitical uncertainty make tier 1 mines more attractive for their economies of scale and operational resilience
- Companies are looking increasingly at mergers for tier 1 acquisitions instead of sourcing new operations to streamline efficiency and assert market presence

Supply Chain Disruptions

- The gold mining sector faces supply chain problems in 2025, with 70% of gold mining companies reporting logistics delays as their top challenge
- Diesel price volatility and fuel shortages compound transportation costs and delays
- Trade tariffs, border restrictions, and geopolitical conflicts create unpredictability in supply routes. With globalized operations, regulatory and environmental compliance adds complexity
- Globalized operations require costly specific local supply chain solutions

Competitive Analysis

Company	Key Stats	Description
Barrick Mining Corporation TSX:ABX Equity value: \$48B	Mines: 17 Gold produced: 4.1mm ounces D/E: 13.9%	Barrick Mining Corporation is a leading global mining firm focused on gold and copper with a strong market capitalization, diversified operations, and strategic growth initiatives that align with long-term trends in precious metals and energy transition minerals.
Agnico Eagle Mines Ltd NYSE:AEM Equity value: \$76B	Mines: 9 Gold produced: 2.5mm ounces D/E: 2.9%	Agnico Eagle Mines is a top-tier gold producer with a strong market valuation, a solid portfolio of Tier 1 mines across key jurisdictions, and a growth strategy focused on sustainable, stable production with reliable shareholder returns.
Kinross Gold Corporation TSX:K Equity value: \$27B	Mines: 8 Gold produced: 2.1mm ounces D/E: 16.3%	Kinross is positioned as a growth-oriented mid-tier producer with a balanced geographic footprint and solid reserve life. It contrasts with larger peers by focusing more aggressively on organic growth and use of selective acquisitions.
Zijin Mining Group Company SEHK:2899 Equity value: \$94B	Mines: 30 Gold produced: 2.4mm ounces D/E: 56.7%	Zijin Mining Group is a rapidly growing global miner with substantial gold and copper production, strong financial performance, and an expanding international footprint through key acquisitions and large-scale projects.
AngloGold Ashanti plc NYSE:AU Equity value: \$30B	Mines: 11 Gold produced: 2.7mm ounces D/E: 23.1%	AngloGold Ashanti is a global gold mining company with a diverse portfolio of 11 operations across 10 countries on four continents. It produced 2.66 million ounces of gold and 3.75 million ounces of silver in 2023, employs nearly 40,000 people, and focuses on sustainable mining through exploration, acquisitions, and operational excellence.

Newmont will benefit from macroeconomic tailwinds more than its competitors due to its larger gold reserves and higher liquidity.

Portfolio Restructuring and Divestitures

Portfolio Optimization

- Newmont's leadership has shifted its strategy to consolidate its tier 1 assets: mines with low costs, large scale, and favourable jurisdictions. Assets that don't meet these criteria are being sold, improving operational efficiency and shareholder returns
- Divesting will improve the company's cost structure, as selling high-cost mines increases the average margin per ounce produced
- In early 2024, Newmont announced a divestiture program involving the sale of six non-core operations, which it completed in Q2 2025

Cashflows from Divestitures

- By the end of Q2 2025, Newmont has increased its cash flow by more than \$3 billion USD from its divestiture programs and is expected to continue generating up to \$4.3 billion through the remainder of the year
- Upon the sale of Porcupine to Discovery Silver Corp, Newmont also received 119 million common shares, totalling 15% of its capital (see left: equity stake)
- This provides them liquidity to initiate projects worth 1.3 billion USD, such as Tanami Expansion 2, the Cadia Panel Caves, and Ahafo North, among others. With a 12.8% average return on capital, this investment will generate more than 166 million per year starting Q1 2027
- This allows them to redirect funds towards items such as a \$2 billion debt buyback program announced in August 2025 and a \$3 billion share repurchase program in July 2025

Newmont will increase its efficiency and liquidity by divesting non-core assets.

Established Presence in a Capital-Intensive Industry

Newmont's Strategic Partnerships

- Established in 2019, Nevada Gold Mines is a joint venture in which Newmont owns 38.5% and Barrick Gold holds 61.5%. The partnership enables both companies to share infrastructure, leverage operational and technical improvements, and optimize capital spending
- At the same time, Newmont has increased its ownership in strategic projects, such as the Yanacocha mine takeover, which aligned with its long-term plans of extending the mine's life and capturing 100% of future cash flows
- Newmont's scale allows it to fast-track value creation from M&A, bypassing lengthy financing, alleviating regulation risk, and streamlining mine development obstacles that constrain smaller producers

81%

19%

■ Revenue from wholly owned mines ■ Revenue from jointly owned mines

High Quality Mines

- Newmont's control of high-quality mines, combined with the industry's significant capital barriers to entry, underpins its long-term leadership position
- With multiple projects located in developing nations, Newmont's geographical diversity reduces its exposure to supply chain disruptions
- Through its owned mines, Newmont controls a total of 170 million ounces of gold reserves, the largest gold reserve in the world
- The company owns more than 50% of the world's tier 1 mines

Deposit Control

- Nevada Gold Mines: Accounts for 73% of total U.S. gold production and is the world's largest mining complex, producing over 2.6 million ounces in 2024. Expected to operate until 2040.
- Pueblo Viejo: The largest gold mine in Central America. An ongoing expansion project is expected to add 275,000–325,000 ounces annually. Operations extend until 2037.
- Ahafo: One of Arica's largest gold deposits. Newmont's Ahafo North project will add roughly 50,000 ounces starting in late 2025. Operations are projected to continue beyond 2050.

Newmont's strategic acquisitions and partnerships, combined with its control of high-quality mines, position it as a resilient industry leader with a well-balanced, sustainable portfolio.

Exposure to Gold Upside with Downside Protection

Gold Security

- Gold is currently trading at an all-time high, and analysts are optimistic it will continue surging due to potential U.S. federal rate cuts given the economy's slowdown.
- Central banks have pushed up the demand for gold by substantially increasing their gold reserves, amidst the volatility from Trump's policies
- With global uncertainty, investors are more attracted to a safe-haven asset as they have proven to act as an insurance against historical economic downturns
- If tariffs are deemed illegitimate and lifted after the Supreme Court's review in November 2025, inflation would ease, giving the Fed room to restart its cutting cycle
- Gold, also used as a risk-free asset instead of treasuries and bonds when these have low yields, is already at record highs despite rates (~4.5%) above the 2.5-3% new neutral level
- Cutting interest rates would enable further gold appreciation, boosting Newmont's margins and the reservoir's value

Newmont's Market Leadership

- Newmont is the world's largest gold producer; hence, it will absorb the most benefit of this mineral's appreciation, but is also exposed to more severe devaluation risks
- However, Newmont's scale of operations and strong liquidity ratios provide the company with the flexibility to hold back some materials in reserves in the event of a market downswing and remain operational, unlike some competitors who may be forced to sell at deflated prices

As Newmont has the greatest exposure to gold, it stands to gain the most from an increase in gold prices, while its scale and liquidity allow resilience in the event of a decline.

Revenue Assumptions

Revenue Schedules	2025	2026	2027	2028	2029	2030

Note: Companies Selected From CapIQ's Comps Set

Based on the Industry Average of 22.36x EV/FCF, we find that Newmont Corporation trades at a discount; applying the industry multiple gives us an upside of 37%.

Football Field Summary

Putting it all together, our valuation gives us an upside of 15.9%.

Operating in a Macro-Driven Industry

Matrix

Risks

1

Commodity Price Volatility

The main revenue stream heavily depends on the metal prices. Even a \$100/oz swing can shift the FCF by hundreds of millions of dollars.

2

Operation & Regulations Cost Hikes

Concurrent expansions and developmental projects will increase CAPEX. Stricter ESG Regulations may also impact project costs and timeline.

3

Geopolitical Tension

Recent tariffs and policies can significantly fluctuate the supply and demand for gold, especially by central banks.

If these risks came to fruition, Newmont's share price would see a decline and outlook on the company would be downgraded. Nevertheless, Newmont's positioning in the industry give it the flexibility to be resilient

Expansion 2 is expected to increase average annual gold production by approximately 150,000 to 200,000 ounces per year

Opening of panel caves PC2-3 and PC2:

- PC2-3: projected to increase production from 100 to 150 thousand ounces of gold, and 40 to 60 thousand tonnes of copper per year.
- PC1-2: projected to increase production from 275 to 325 thousand ounces of gold, and between 35 and 55 thousand tonnes of copper per year

Opening of four open pit mines and a stand-alone mill that is expected to increase production between 275,000 and 325,000 ounces per year.
